

UnboundID Synchronization Server

No-Cost, No-Risk Directory Migration Tool

Make a smooth transition to a high-volume directory services architecture

Directory servers are the backbone of our digital world, helping to keep our identity information safe and secure and ensuring that our applications are always available. In fact, the days of directory services working within the “walls” of an enterprise are long gone. Today’s applications are routinely accessed via the web and wireless channels, and they require an identity management platform that can keep up with the growing demands of an ever more interconnected and highly mobile world. That’s where UnboundID comes in.

Designed to support the latest high-volume consumer and business applications, the UnboundID Directory Services 2.0 platform empowers you to better manage identity data, reduce operational costs, and gain control of growing data centers. And now, UnboundID offers a Synchronization Server that makes it easy — and completely free — for Sun Directory Server Enterprise Edition customers to migrate to the UnboundID next-generation directory services. What’s more, the Synchronization Server enables you to run both the Sun and UnboundID environments in parallel throughout the migration, helping to ensure a smooth transition.

Created specifically to help Sun customers migrate safely and smoothly to the new UnboundID Directory Services 2.0 architecture, the UnboundID Synchronization Server provides fast, highly available, bi-directional synchronization between Sun Directory Server environments and the UnboundID Directory Server — so it won’t disrupt critical operations. Simply enjoy the peace of mind of a risk-free migration and complete data consistency.

UnboundID Synchronization Server Advantages

Ready to achieve higher service levels, greater efficiencies, and improved flexibility across your infrastructure?

If you’re currently running Sun Directory Server Enterprise Edition, you can use the UnboundID Synchronization Server for free to migrate to the UnboundID Directory Server. You can even run your legacy and next-generation directory server environments in parallel, until you’re ready to transition to the new architecture — in part or in whole.

The UnboundID Synchronization Server supports transformation and mapping of attribute names, values, and distinguished names (DNs), enabling you to make schema and directory information tree (DIT) changes without the extra costs or complexities of additional coding or scripting.

KEY BENEFITS

The UnboundID Synchronization Server makes business sense:

- **No costs:** The product is free for migrating from Sun to UnboundID.
- **No risks:** You can run the Sun and UnboundID environments in parallel throughout the migration.
- **No hassles:** There’s no need for dedicated hardware and administrative requirements are minimal.

No-Cost, No-Risk Directory Migration Tool

FEATURES	BENEFITS
Bi-directional Synchronization	<ul style="list-style-type: none">• Provides a choice of real-time or scheduled synchronization between Sun and UnboundID directory server environments, which enables companies to operate both architectures in parallel• Mitigates risk and enables migration to the new platform one application at a time or en masse
High Performance and Availability	<ul style="list-style-type: none">• Handles the most demanding, high-transaction application environments with built-in redundancy to ensure zero downtime
DN mapping and attribute mapping/transformation	<ul style="list-style-type: none">• Enables both DIT and schema modifications without complex, costly coding and scripting
Advanced Replication	<ul style="list-style-type: none">• Supports filtered, fractional and sub-tree replication scenarios for maximum flexibility in where data resides during the migration• Provides added security because only a subset of data needs to be synchronized between directory servers — that is, only the data required for meeting specific application needs

Talk to us today

UnboundID develops next-generation identity management software to meet the rigorous demands of today's organizations. Our Directory Services 2.0 family of products includes UnboundID Directory Server, Synchronization Server, Directory Proxy Server and LDAP SDK for Java.
